Mr. Spurlin,

As instructed, as part of the ongoing removal efforts and response operations, Colonial Pipeline Company will continue to employ the applicable components of the O&M Plan, including the specific activities you recently requested in your email, in order to address the current discharge and threat of discharge to the surface waters.

Notwithstanding your current request, we have continued to implement the applicable necessary components of the O&M Plan ever since our initial collaborative discussion on the issue and your initial instruction to do so, when the release from the pipeline occurred.

As always, thank you for your assistance in this matter.

Greg Glaze

Mr. Glaze,

As discussed during the response, the unfortunate circumstances of the spill have resulted in an extended period of a discharge, or threat of discharge, to the surface water (McCrory creek). Although EPA is no longer actively monitoring the mitigation efforts in the field, EPA request that Colonial continue the following activities to address the discharge or threat of discharge to the water.

Maintain sufficient boom and containment measures in the creek to contain and collect any oil discharge

Recover and properly dispose of fuel from trenches, pits, sumps, etc.. to prevent oil discharge to the waterway

These activities should continue until there is no longer a discharge to the surface water.

Please confirm Colonials willingness to continue these actions. I you have any questions, please feel free to contact me at 731 394-8996.
